

GRADE 6 | DAY 7

WEDNESDAY, SEPTEMBER 2, 2026

TODAY'S GOAL

Move forward where Tuesday showed readiness, while giving targeted repair only where the evidence still shows a gap.

Lesson order is different again today. Breaks are built into the schedule.

Use the glossary boxes before asking for a definition.

Time	Lesson
9:00-9:50	Literature - fiction: motivation, inference, theme evidence
9:50-10:00	BREAK
10:00-10:35	French - etre vs avoir + negative de
10:35-10:50	SNACK / BREAK
10:50-11:50	Mathematics - unit rates and 'per 1'
11:50-12:30	Science - why objects appear colored
12:30-1:15	LUNCH
1:15-2:00	History / Civics - Athenian democracy and citizenship
2:00-2:10	BREAK
2:10-2:50	Writing - analytical paragraph: evidence -> reasoning
2:50-3:30	Computer Science / AI - training, test data, overfitting
3:30-3:40	BREAK
3:40-4:10	Theatre / Speaking - 60-second civic speech
4:10-4:20	Closeout - Started -> Finished -> Checked -> Filed

9:00

YESTERDAY'S FEEDBACK

Read once before Literature.

WHAT TUESDAY SHOWED

Math: equivalent ratios and ratio tables improved enough to move into unit rates. Keep one short ratio-table warmup.

Science: reflection, absorption, and transmission are strong. The new gap is explaining WHY a red object looks red under white light.

History: culturally connected vs politically unified is now secure enough to move forward.

French: *etre/avoir* meaning is improving, but '*elles sont contentes*' and '*je n'ai pas de...*' still need repair.

Literature: plot comprehension is good. Motivation and theme evidence need more precise reasoning.

Writing: *because / but / so* are improving. Continue separating facts from the relationship between facts.

CS/AI: training data is becoming clearer, but test data and generalization are not yet secure.

Art/Design: Tuesday's light-material visual explainer is complete. Small science-diagram note: rays should stop at an opaque object.

QUESTION-QUALITY RULE

Every question names the exact person, sentence, data set, or idea it refers to.

If a prompt asks for evidence, use a detail that actually proves the claim - not just any event from the text.

9:00-9:50

LITERATURE 6 - MOTIVATION AND THEME EVIDENCE

Full Grade 6 fiction; evidence must prove the idea.

WORDS YOU NEED TODAY

motivation - the reason a character chooses an action

inference - a conclusion made from evidence plus reasoning

consequence - a result that follows from an action or event

theme - a complete message about life, people, or choices developed by a story

evidence - a specific detail that supports an interpretation

significance - what a detail proves or reveals

LISTEN FIRST - VOICE TUTOR PROMPT

Teach motivation as 'what the character wants to avoid, gain, protect, prove, or change.' Connect to Tuesday: Malik considered lying because he wanted to avoid embarrassment/blame and delaying the team. Then teach evidence quality: an event is not automatically evidence for a theme unless the student explains what the event reveals. Model two unrelated examples before Atticus reads. Do not give the story's theme. Ask self-contained questions that name the character and the exact action being discussed.

Worked example 1 - motivation

EXAMPLE

A student hides a low quiz score before a parent meeting. Likely motivation: avoid embarrassment or consequences. Evidence: the student hides the paper immediately after seeing the score.

Worked example 2 - evidence + significance

EXAMPLE

Theme claim: asking for help can prevent a small problem from becoming larger. Evidence: a character admits she cannot finish a task alone and the group completes it. Significance: the action shows that honesty about limits can lead to a better outcome.

Original story - The Last Battery

On Wednesday afternoon, Nia's robotics group had exactly forty minutes left before the school showcase began. Their small rover could follow a black line across the floor, stop at a marker, and lift a plastic cube with a motorized arm.

During the final test, the rover slowed halfway across the mat and stopped. The battery indicator blinked red.

'We have one charged battery left,' Tomas said. 'Use it now.'

Nia looked at the spare battery on the table. Their teacher had warned the class to save one battery for the showcase itself. If they used the last charge during practice and something drained it, the rover might fail in front of visitors.

'We could skip the last test,' Nia said.

Tomas shook his head. 'The arm hasn't lifted the cube correctly twice in a row. If we don't test it, we won't know whether the problem is the battery or the code.'

Nia wanted the rover to look finished. She also did not want to risk discovering a new problem with only minutes left.

She picked up the charged battery, then stopped. 'Let's test only the arm,' she said. 'We don't need to run the whole course.'

They connected the battery and placed the rover beside the cube. The arm rose, paused, and then dropped the cube.

'Code,' Tomas said.

Nia opened the program. One timing value had been changed from 1.2 seconds to 0.2 seconds. She corrected it, and the arm completed three successful lifts.

The group removed the battery immediately. It still showed almost a full charge.

At the showcase, the rover completed the course. Later, Tomas said, 'Good thing we didn't save the battery by saving the mistake.'

Nia smiled. 'Good thing we didn't waste the battery either.'

9:00-9:50

LITERATURE - CLOSE READING

Explain the inference, not only the event.

1. What problem does Nia's group face after the rover stops during the final test?

2. Nia says, 'We could skip the last test.' What TWO things is she trying to protect or avoid? Use the story.

3. Why does Tomas want to test the rover even though only one charged battery remains?

4. What compromise does Nia propose, and why is it a reasonable compromise?

5. What does the 0.2-second timing error prove about the cause of the arm problem?

6. Write one universal theme statement. Do not use Nia's or Tomas's name.

7. Give TWO pieces of evidence that support your theme. After each piece, write one sentence explaining its significance.

8. Write a 3-sentence objective summary.

EXIT TICKET

Explain the difference between a character's MOTIVATION and the CONSEQUENCE of the character's action. Use one example from today's story.

10:00-10:35

FRENCH 6 - ETRE, AVOIR, AND NEGATIVE DE

Meaning first; conjugation second.

WORDS YOU NEED TODAY

etre - to be - state, identity, description

avoir - to have - possession and some common expressions

meaning cue - the idea in the sentence that tells which verb belongs

negation - ne...pas or n'...pas

de after negation - in many possession sentences, un/une/des becomes de after ne...pas

conjugate - change the verb form to match the subject

LISTEN FIRST - VOICE TUTOR PROMPT

Repair Tuesday's exact errors without restarting the entire lesson. Ask whether each sentence means BE or HAVE before conjugating. Model 'Elles sont contentes' and contrast it with 'Elles ont deux livres.' Then model 'J'ai un stylo -> Je n'ai pas de stylo' and 'J'ai des devoirs -> Je n'ai pas de devoirs.' Use natural French pronunciation. Have Atticus say the sentence before writing. Keep corrections focused on etre/avoir meaning and negative de.

WORKED EXAMPLE 1

Elles sont contentes. = They are happy. Description -> etre.

WORKED EXAMPLE 2

Elles ont trois cahiers. = They have three notebooks. Possession -> avoir.

WORKED EXAMPLE 3

J'ai des devoirs. -> Je n'ai pas de devoirs.

1. Choose etre or avoir, then conjugate: Vous _____ prêts.

2. Choose *etre* or *avoir*, then conjugate: Elles _____ deux chiens.

3. Choose *etre* or *avoir*, then conjugate: Ils _____ fatigues.

4. Make negative: J'ai une calculatrice.

5. Make negative: Nous avons des livres.

6. Answer in a complete French sentence: Est-ce que tu as des devoirs aujourd'hui?

7. Answer in a complete French sentence: Est-ce que tu es pret pour l'histoire?

ORAL CHECK

Say six sentences: three with *etre* and three with *avoir*. Include two negative possession sentences using *de*.

10:50-11:50

MATHEMATICS 6 - UNIT RATES

Move from equivalent ratios to 'per 1'.

WORDS YOU NEED TODAY

rate - a ratio comparing quantities with different units

unit rate - a rate with a denominator or second quantity of 1

per - for each; often signals a unit rate

equivalent ratios - ratios that describe the same comparison

double number line - two aligned number lines showing corresponding values

constant of proportionality - the fixed multiplier connecting the two quantities in a proportional relationship

LISTEN FIRST - VOICE TUTOR PROMPT

Start with a 5-minute equivalent-ratio warmup, then introduce unit rate as 'how much for 1.' Use real units in every example. Model 3 examples: 180 miles in 3 hours -> 60 miles per hour; \$12 for 4 notebooks -> \$3 per notebook; 6 cups water for 2 cups rice -> 3 cups water per 1 cup rice. Show both division and a ratio-table route. Ask which quantity should become 1 and why. Use grid paper for ratio tables or double number lines.

Warmup

1. Complete: $4:7 = 12: \underline{\hspace{1cm}}$.

2. Simplify 15:25.

Teaching

A unit rate answers: HOW MUCH for ONE of the second quantity?

WORKED EXAMPLE 1

180 miles in 3 hours: $180 \div 3 = 60$, so 60 miles per 1 hour = 60 mph.

WORKED EXAMPLE 2

\$12 for 4 notebooks: $12 \div 4 = 3$, so \$3 per notebook.

WORKED EXAMPLE 3

6 cups water for 2 cups rice: $6 \div 2 = 3$, so 3 cups water per 1 cup rice.

Guided practice - use grid paper

1. A cyclist travels 72 miles in 4 hours. Find the unit rate in miles per hour.

2. Five identical pens cost \$8.75. Find the cost per pen.

3. A machine fills 18 bottles in 3 minutes. Find bottles per minute.

4. A recipe uses 10 cups broth for 4 cups rice. Find cups broth per 1 cup rice. You may use a ratio table.

10:50-11:50

MATHEMATICS - INDEPENDENT + EXIT

Write the units in every unit rate.

1. A train travels 315 miles in 5 hours. What is its unit rate in miles per hour?

2. Six movie tickets cost \$54. What is the cost per ticket?

3. A faucet releases 14 liters in 2 minutes. What is the unit rate in liters per minute?

4. A bag contains 2.4 kilograms of rice split equally into 6 packages. What is the mass per package?

5. A map scale says 3 centimeters represents 24 kilometers. How many kilometers does 1 centimeter represent?

6. Which is the better price: 4 notebooks for \$10 or 6 notebooks for \$13.50? Find both unit prices and compare.

EXIT TICKET - NO HELP

E1. A runner covers 9 miles in 1.5 hours. Find miles per hour.

E2. \$15 buys 5 kilograms of apples. Find dollars per kilogram.

E3. Explain in one sentence what 'per 1' means in a unit rate.

WORKSPACE

GRID PAPER - MATH

Use for ratio tables, double number lines, and organized scratch work.

11:50-12:30

SCIENCE 6 - WHY OBJECTS APPEAR COLORED

Selective reflection and absorption.

WORDS YOU NEED TODAY

white light - visible light containing many wavelengths/colors

wavelength - a property of light related to the color we perceive

selective reflection - reflecting some wavelengths more strongly than others

selective absorption - absorbing some wavelengths more strongly than others

reflect - send light away from a surface

absorb - take in light energy

LISTEN FIRST - VOICE TUTOR PROMPT

Connect to Tuesday: Atticus correctly identified reflection, absorption, and transmission, but his red-book explanation described only that light reaches the eyes. Teach the missing step: under white light, a red object reflects more red wavelengths toward the eyes and absorbs much of the other visible wavelengths. Use simple language first, then the terms selective reflection and selective absorption. Work three examples before independent practice.

WORKED EXAMPLE 1

Red apple under white light: reflects more red light toward the eyes and absorbs much of the other visible light.

WORKED EXAMPLE 2

Black shirt: absorbs much of the visible light, so little visible light is reflected to the eyes.

WORKED EXAMPLE 3

White paper: reflects many visible wavelengths, which together look white.

1. Why does a green leaf usually look green under white light?

2. Why does a black object usually look dark under white light?

3. Why can white paper look bright in a well-lit room?

4. A red book is illuminated only with blue light. Based on today's model, why might the book look very dark instead of bright red?

EXIT TICKET

E1. Explain why a red object appears red under white light using the words reflect and absorb.

E2. Which object generally reflects more visible light: white paper or black cloth? Explain.

1:15-2:00

HISTORY / CIVICS - ATHENIAN DEMOCRACY

Who participated, who did not, and why the word needs context.

WORDS YOU NEED TODAY

citizen - a recognized member of a political community with rights and duties

direct democracy - a system in which eligible citizens vote directly on public decisions

assembly - a gathering of citizens for debate and decisions

political rights - rights to participate in government

excluded - left out or not permitted to participate

context - background information needed to understand a claim accurately

LISTEN FIRST - VOICE TUTOR PROMPT

Build from Tuesday's strong distinction between shared culture and separate governments. Explain Athenian direct democracy accurately and with context: eligible adult male citizens could participate, but women, enslaved people, and many non-citizen residents were excluded. Do not present Athens as modern universal democracy. Use a modern school-club analogy only to clarify direct voting versus electing representatives, not to equate the systems.

Reading - Democracy, but for whom?

In classical Athens, some political decisions were made in an assembly where eligible male citizens could speak and vote directly. This differed from systems in which a king or a small hereditary group made all major decisions.

Athenian participation was significant in the history of government, but it was limited. Women did not have the same political rights as male citizens. Enslaved people had no political citizenship, and many foreigners living in Athens could not participate as citizens.

This means two statements can both be true: Athens developed an important form of direct citizen participation, and Athens did not give equal political rights to everyone living there.

Historians therefore use context. Saying only 'Athens was a democracy' is incomplete unless we also ask who counted as a citizen, who could vote, and who was excluded.

1. What made Athenian democracy 'direct' for eligible citizens?

2. Name TWO groups who were excluded from full political participation in classical Athens.

3. Why is the sentence 'Athens was a democracy' true but incomplete?

4. What question should a historian ask whenever a source says that a society gave 'citizens' political rights?

5. Compare direct democracy with representative democracy in one clear sentence.

EXIT TICKET

In 3-4 sentences, explain both the importance and the limitation of Athenian democracy. Include the words citizen and excluded.

2:10-2:50

WRITING 6 - EVIDENCE -> REASONING

An analytical paragraph should show WHY the evidence matters.

WORDS YOU NEED TODAY

analytical writing - writing that explains what evidence shows or means

claim - the main point you are proving

evidence - a specific fact or detail that supports the claim

reasoning - the explanation of why the evidence proves the claim

significance - why the evidence matters

transition - a word or phrase that connects ideas

LISTEN FIRST - VOICE TUTOR PROMPT

Tuesday's writing showed stronger connectors and cross-subject examples. Today shift from sentence combining to analytical writing. Teach the structure claim -> evidence -> reasoning. Model one full paragraph using an unrelated example. Then model two short evidence/reasoning pairs. Require Atticus to explain significance after each piece of evidence instead of listing facts.

WORKED EXAMPLE 1

Claim: The team became more reliable after the mistake. Evidence: they added a spare-key check to the checklist. Reasoning: changing the system means the group learned from the problem instead of depending only on one person's memory.

WORKED EXAMPLE 2

Claim: Athens had limited political participation. Evidence: women and enslaved people were excluded. Reasoning: this shows that political rights were not shared by everyone living in Athens.

1. Write one sentence of REASONING after this evidence: 'The rover's arm failed because the timing value had been changed to 0.2 seconds.' Explain what this evidence reveals.

2. Write one sentence of REASONING after this evidence: 'Wax paper transmits light but the image is blurry.' Explain what this evidence proves about the material.

Analytical paragraph

Write 8-10 sentences answering: Why can testing a system before an important event be worth the risk of discovering a problem? Use 'The Last Battery' as your main evidence. Include a clear claim, at least TWO specific story details, reasoning after each detail, and a conclusion.

2:50-3:30

COMPUTER SCIENCE / AI

Training data teaches; test data evaluates.

WORDS YOU NEED TODAY

training data - examples used to teach a model

test data - new examples kept separate and used to evaluate the trained model

generalization - performing well on new examples or conditions not seen exactly during training

overfitting - learning the training examples too narrowly and performing poorly on new examples

feature - a pattern or property the model may use

background dependence - when a model relies too heavily on the background instead of the intended object

LISTEN FIRST - VOICE TUTOR PROMPT

Repair Tuesday's remaining confusion. First define training data and test data with a school analogy: practice problems teach; a new quiz checks whether learning transfers. Then define generalization and overfitting. Use an image classifier that sees cups only on a white table: perfect training accuracy can still fail on a cup outdoors. Make clear that the solution is usually MORE VARIED training examples, not keeping every background clean and identical. Ask concrete questions with the actual object, training condition, and test condition named.

WORKED EXAMPLE 1

Training: 30 cup photos on many backgrounds. Test: 10 new cup photos not used during training.

WORKED EXAMPLE 2

A model gets every training photo correct but fails on new backgrounds -> possible overfitting / weak generalization.

WORKED EXAMPLE 3

To reduce background dependence, vary the backgrounds during training so the object - not one

background - is the reliable pattern.

1. Which set should be kept separate until evaluation: training data or test data? Explain why.

2. A classifier gets 100% accuracy on its training images but 55% on new images. What does this suggest about generalization?

3. A cup classifier was trained only on a white tabletop. Name TWO changes to the training data that could reduce background dependence.

4. Why is it a bad evaluation if the exact same photos are used both to train and to test the model?

EXIT TICKET

E1. Define generalization in your own words.

E2. Explain one difference between training data and test data.

E3. In one sentence, define overfitting.

3:40-4:10

THEATRE / SPEAKING

60-second civic speech: voice, structure, audience.

WORDS YOU NEED TODAY

audience - the people listening or watching

delivery - how a speaker uses voice, pace, volume, and expression

emphasis - giving extra stress to an important word or idea

pause - a deliberate moment of silence

persuade - try to convince an audience

rehearse - practice a performance before presenting it

LISTEN FIRST - VOICE TUTOR PROMPT

Act as a theatre/public-speaking coach. Atticus will give a 45-60 second civic speech as if he is an Athenian citizen speaking to an assembly. The topic is fictional and safe: argue whether the city should spend more public money repairing the harbor or improving the market road. Help him choose one position, organize it into opening -> two reasons -> closing, and rehearse delivery. Focus on pace, volume, pauses, and emphasis. Do not write the final speech for him.

Your fictional assembly question

Athens has enough public money for ONE major project this season: repair the harbor OR improve the market road. Choose one and persuade the assembly.

1. My position:

2. Reason 1:

3. Reason 2:

4. My closing sentence:

PERFORMANCE CHECKLIST

45-60 seconds

Clear opening position

Two reasons

One deliberate pause

Emphasize one important phrase

Face the audience and finish with a complete closing sentence

4:10-4:20

WEDNESDAY CLOSEOUT

Started -> Finished -> Checked -> Filed

NOTHING MISSING CHECK

Literature questions + exit

French practice + oral check

Math guided + independent + exit

Science questions + exit

History questions + exit

Writing reasoning + analytical paragraph

CS/AI practice + exit

Theatre speech plan + performance

One thing I understand better today:

One glossary word I can define without looking:

One question I still have:

Wednesday glossary - quick reference

Subject	Term	Meaning
Literature	motivation	why a character chooses an action
Literature	significance	what a detail proves or reveals
French	de after negation	many un/une/des possession phrases become de after ne...pas
Math	unit rate	a rate expressed per 1
Math	per	for each
Science	selective reflection	reflecting some wavelengths more strongly than others

History	direct democracy	eligible citizens vote directly on public decisions
Writing	reasoning	why the evidence proves the claim
CS/AI	test data	new examples used to evaluate a trained model
CS/AI	overfitting	learning training examples too narrowly and failing on new examples
Theatre	delivery	how a speaker uses voice, pace, volume, and expression

Key Wednesday decisions

Math moves into unit rates because Tuesday independent and exit evidence was strong. Science advances to selective reflection/color; do not reteach transparent/translucent/opaque unless a new error appears. History advances to Athenian citizenship/direct democracy. French remains targeted at *être/avoir* meaning and negative *de*. CS/AI remains in reinforcement: training vs test data, generalization, and overfitting.

Literature: Accept a supported theme such as 'careful testing can prevent hidden problems' or 'responsibility includes balancing risk with preparation.' Motivation must name what Nia wants to avoid/protect. Evidence must include significance.

French: 1 *êtes*. 2 *ont*. 3 *sont*. 4 *Je n'ai pas de calculatrice*. 5 *Nous n'avons pas de livres*. Open responses vary.

Math warmup: 1 21. 2 3:5.

Math guided: 1 18 mph. 2 \$1.75 per pen. 3 6 bottles/min. 4 2.5 cups broth per cup rice.

Math independent: 1 63 mph. 2 \$9/ticket. 3 7 L/min. 4 0.4 kg/package. 5 8 km/cm. 6 \$2.50 vs \$2.25; six for \$13.50 is better.

Math exit: E1 6 mph. E2 \$3/kg. E3 amount for one unit of the comparison quantity.

Science: Green leaf reflects more green wavelengths; black absorbs much; white reflects many; red under blue light may look dark because little red light is available to reflect. Exit should explicitly use reflect/absorb.

History: Direct = eligible citizens themselves vote in assembly; excluded examples: women, enslaved people, many foreign residents. 'Athens was a democracy' is incomplete without citizenship/exclusion context.

Writing: Require claim + 2 story details + reasoning after each detail. Mechanics and reasoning scored separately.

CS/AI: 1 test data. 2 weak generalization / possible overfitting. 3 vary background plus angle/light/distance. 4 same images do not measure transfer to unseen data. Exit: generalization = good performance on new examples; training teaches, test evaluates; overfitting = fits training too narrowly.
