

GRADE 6 | DAY 8

THURSDAY, SEPTEMBER 3, 2026

TODAY'S GOAL

Progress into percent in Math, deepen color/light reasoning in Science, and continue analytical reading/writing at full Grade 6 level.

French and CS/AI receive targeted reinforcement because Wednesday still showed specific gaps.

Wednesday Theatre was missed because of football. It is not marked missing or late; Theatre appears again today as normal enrichment.

Time	Lesson
9:00-9:45	History / Civics - direct vs representative democracy
9:45-9:55	BREAK
9:55-10:50	Mathematics - percent as a rate per 100
10:50-11:00	SNACK / BREAK
11:00-11:40	Science - selective reflection and colored light
11:40-12:20	Literature / Drama - motivation through dialogue and stage directions
12:20-1:05	LUNCH
1:05-1:40	French - etre/avoir + ne...pas de repair
1:40-1:50	BREAK
1:50-2:35	Writing - evidence, reasoning, and sentence clarity
2:35-3:15	Computer Science / AI - overfitting and fair testing
3:15-3:25	BREAK
3:25-3:55	Theatre - perform the scene with two different motivations
3:55-4:05	Closeout

9:00

WEDNESDAY FEEDBACK

Use this to understand Thursday's pacing.

WHAT WEDNESDAY SHOWED

Math: unit rates were very strong. One decimal-placement error (2.4 kg split into 6 packages) means we keep a short division check, but the course is ready to begin percent.

Science: he now knows reflection/absorption/transmission, but selective reflection is not yet secure. He must explain WHICH colors are reflected or absorbed.

History: the limits of Athenian democracy are mostly understood, but direct vs representative democracy needs a cleaner comparison. The written exit was not completed.

French: possession with avoir is improving, but descriptions still sometimes use avoir. Negative possession still needs n'...pas de.

Literature: plot understanding is strong. Motivation is improving, but consequence and theme evidence still need precise explanation.

Writing: claim/evidence/reasoning is improving. Sentence boundaries and evidence quality remain the main targets.

CS/AI: training vs test data improved. Generalization and overfitting are closer, but definitions are still not stable enough to advance.

Theatre: not assessed Wednesday because football shortened the afternoon.

QUESTION-QUALITY RULE

Every question names the exact idea, person, sentence, or data set it refers to.

When a prompt says explain, a label alone is not enough. State the relationship or reason.

9:00-9:45

HISTORY / CIVICS - DIRECT VS REPRESENTATIVE DEMOCRACY

Finish the comparison, then apply it.

WORDS YOU NEED TODAY

direct democracy - eligible citizens vote directly on public decisions

representative democracy - citizens choose representatives who make many public decisions on their behalf

citizen - a recognized member of a political community with rights and duties

representative - a person chosen to act or vote on behalf of others

political participation - taking part in government or public decision-making

limitation - a boundary or restriction on how far something applies

LISTEN FIRST - VOICE TUTOR PROMPT

Start from Wednesday's work. Teach one clean distinction: direct democracy means eligible citizens vote on the issue itself; representative democracy means citizens elect people who vote or govern on their behalf. Keep Athens in context: many residents were excluded. Ask self-contained questions with the system named every time.

WORKED EXAMPLE 1

Direct: eligible citizens vote directly on whether to fund a harbor repair.

WORKED EXAMPLE 2

Representative: citizens elect council members; the council members vote on the harbor budget.

1. In a direct democracy, who votes on the public issue itself?

2. In a representative democracy, what do citizens choose people to do on their behalf?

3. Why would it be inaccurate to say that everyone living in classical Athens participated equally in its direct democracy?

4. Give one advantage and one possible challenge of direct citizen voting when a community becomes very large.

5. Give one advantage and one possible challenge of representative government.

EXIT TICKET

In 3-4 sentences, compare direct democracy and representative democracy. Then explain why calling Athens a democracy still requires context about who was excluded.

9:55-10:50

MATHEMATICS 6 - PERCENT

Percent means per 100.

WORDS YOU NEED TODAY

percent - a rate per 100; % means per hundred

whole - the complete quantity

part - a portion of the whole

percent grid - a 10 by 10 grid with 100 equal squares

equivalent - equal in value even when written differently

benchmark percent - a familiar percent such as 10%, 25%, 50%, or 100% used for reasoning

LISTEN FIRST - VOICE TUTOR PROMPT

Begin with a 3-minute unit-rate check, then introduce percent as another rate: per 100. Use a 10x10 grid and connect 25/100, 0.25, and 25%. Model 30%, 50% of 40, and 25% of 80 before practice. Build meaning before formulas.

Warmup - unit rates stay alive

1. 24 liters in 3 minutes = _____ liters per minute.

2. \$18 for 6 notebooks = \$_____ per notebook.

WORKED EXAMPLE 1

30 shaded squares out of 100 = $30/100 = 30\%$.

WORKED EXAMPLE 2

50% means half. Half of 40 is 20, so 50% of 40 = 20.

WORKED EXAMPLE 3

25% means one fourth. One fourth of 80 is 20, so 25% of 80 = 20.

1. Shade 35 squares on a 100-square grid. What percent is shaded?

2. Write 62% as a fraction with denominator 100 and as a decimal.

3. Find 10% of 90. Explain the benchmark-percent reasoning.

4. Find 50% of 74.

5. Find 25% of 60.

9:55-10:50

MATHEMATICS - INDEPENDENT + EXIT

State the whole, the percent, and the part.

1. A class has 100 raffle tickets and 42 are sold. What percent are sold?

2. Write 18% as a fraction out of 100 and as a decimal.

3. Find 10% of 250.

4. Find 50% of 86.

5. Find 25% of 120.

6. A 60-page book is 50% completed. How many pages have been read?

7. A game has 80 levels and 25% are complete. How many levels are complete?

8. Which is larger: 40% of 50 or 25% of 100? Show both calculations.

EXIT TICKET - NO HELP

E1. Explain what the word percent means.

E2. Find 10% of 340.

E3. Find 25% of 48.

E4. Explain why 50% of a quantity is the same as one half of the quantity.

WORKSPACE

HUNDRED GRIDS - MATH

Each grid has 100 equal squares.

WORDS YOU NEED TODAY

white light - visible light containing many wavelengths/colors

selective reflection - reflecting some wavelengths more strongly than others

selective absorption - absorbing some wavelengths more strongly than others

wavelength - a property of light related to perceived color

illuminate - shine light on an object

available light - the wavelengths/colors present in the light source

LISTEN FIRST - VOICE TUTOR PROMPT

Wednesday showed that Atticus knows light reflects from an object to the eye, but he does not yet consistently explain which colors are reflected or absorbed. Teach: a red object appears red under white light because it reflects more red light toward the eyes and absorbs much of the other visible light. Then change the light source: under only blue light, a red object may look dark because little red light is available to reflect.

WORKED EXAMPLE 1

Red paper under white light: reflects more red wavelengths; absorbs much of the rest -> looks red.

WORKED EXAMPLE 2

White paper under white light: reflects many visible wavelengths -> looks bright/white.

WORKED EXAMPLE 3

Red paper under blue light: little red light is available to reflect -> it can look dark.

1. Why does a green leaf usually appear green under white light? Use the words reflect and absorb.

2. Why does black cloth usually look dark under white light? Avoid the word all unless you explain it as an approximation.

3. Why does white paper usually look bright under white light?

4. A blue object is illuminated only with red light. Why might it look dark?

5. Explain the difference between the color of an object and the color of the light illuminating it.

EXIT TICKET

E1. Complete: A red object looks red under white light because it reflects more _____ light and absorbs much of the _____ visible light.

E2. Why can the same object appear different under a different-colored light source?

11:40-12:20

LITERATURE / DRAMA - READING A SCENE

Infer motivation from dialogue and stage directions.

WORDS YOU NEED TODAY

dialogue - the words characters speak

stage direction - a written instruction describing action, movement, or expression

subtext - meaning or feeling underneath the literal words

motivation - why a character chooses an action

conflict - a struggle between goals, people, or choices

evidence - a line or stage direction that supports an interpretation

LISTEN FIRST - VOICE TUTOR PROMPT

Teach that plays reveal character through dialogue, stage directions, pauses, and what characters avoid saying. Read the scene aloud. Ask Atticus to infer motivation using an exact line or stage direction. Do not accept plot summary as motivation.

Original scene - The Empty Chair

Characters: MAYA and LEO, members of a student design team.

[A classroom after school. Three chairs surround a table. One chair is empty. A finished model bridge sits in the center.]

MAYA: We should present without him.

LEO: The presentation starts in twenty minutes.

MAYA: Exactly.

[Leo looks toward the door, then at the empty chair.]

LEO: Jonah built half the support system.

MAYA: And Jonah said he'd be here at four.

LEO: He texted that his bus broke down.

MAYA: Five minutes ago.

[A pause.]

LEO: You're angry because he is late, not because the bridge is unfinished.

MAYA: I'm angry because I don't want the judges to think we can't organize ourselves.

LEO: Then an empty chair might say more than a late teammate.

[Maya looks at the bridge. She moves the empty chair closer to the table.]

MAYA: Fine. We wait ten minutes. Then we start.

LEO: That's all I was asking.

1. What does Maya want to protect when she argues that the team should present without Jonah?

2. What does Leo appear to value most? Use one exact line or stage direction as evidence.

3. What does the stage direction '[A pause.]' add to the scene? Explain what it suggests about the tension.

4. Why is Maya's final decision a compromise?

5. Write one sentence describing the central conflict of the scene.

6. Write one possible universal theme statement. Do not use a character's name.

EXIT TICKET

Choose ONE line from the scene. Explain what the line reveals about a character's motivation.

1:05-1:40

FRENCH 6 - MEANING BEFORE FORM

Descriptions use etre; possession uses avoir.

WORDS YOU NEED TODAY

description - what someone or something is like

possession - having or owning something

etre - to be

avoir - to have

negation - ne...pas or n'...pas

de after negation - many un/une/des possession phrases become de after ne...pas

LISTEN FIRST - VOICE TUTOR PROMPT

Do not advance yet. Wednesday still showed 'Ils ont fatigues' and negative-possession errors. Make Atticus decide whether each sentence expresses DESCRIPTION/STATE or POSSESSION before choosing the verb. Model 'Ils sont fatigues' versus 'Ils ont trois livres.' Drill ne/n'...pas de.

WORKED EXAMPLE 1

Ils sont fatigues. = They are tired. Description -> etre.

WORKED EXAMPLE 2

Ils ont trois livres. = They have three books. Possession -> avoir.

WORKED EXAMPLE 3

Nous avons des livres. -> Nous n'avons pas de livres.

1. Choose etre or avoir: Elles _____ heureuses.

2. Choose etre or avoir: Nous _____ deux stylos.

3. Choose etre or avoir: Vous _____ fatigues.

4. Make negative: J'ai un livre.

5. Make negative: Ils ont des devoirs.

6. Make negative: Elle a une calculatrice.

7. Answer in a complete French sentence: Est-ce que tu as des devoirs aujourd'hui?

8. Answer in a complete French sentence: Est-ce que tu es fatigué maintenant?

ORAL CHECK

Say eight short sentences: four with *être* and four with *avoir*. Include three negative possession sentences using *de*.

1:50-2:35

WRITING 6 - EVIDENCE AND REASONING

Make the logic visible and keep sentences controlled.

WORDS YOU NEED TODAY

claim - the point you are proving

evidence - a specific detail that supports the claim

reasoning - why the evidence supports the claim

precise - specific and exact rather than vague

sentence boundary - where one complete sentence ends and another begins

revision - improving meaning, organization, wording, or clarity

LISTEN FIRST - VOICE TUTOR PROMPT

Wednesday's analytical paragraph had a clear main idea and useful evidence, but some evidence was vague and sentence boundaries still need attention. Teach Atticus to ask: What exact event am I citing? What does that event prove? Model one strong evidence/reasoning pair and one weak pair. Then write about Maya's compromise.

WORKED EXAMPLE - WEAK

Evidence: 'The team tested the robot.' Problem: too vague; it does not identify what happened or what the test revealed.

WORKED EXAMPLE - STRONG

Evidence: 'The arm dropped the cube because the timing value had been changed to 0.2 seconds.' Reasoning: This shows the final test uncovered a hidden code error that could have caused failure during the showcase.

1. Improve this vague evidence: 'Maya was upset.' Rewrite it using one exact line or stage direction from 'The Empty Chair.'

2. Write one sentence of reasoning explaining what Maya's exact evidence reveals about her motivation.

3. Repair the sentence boundary: 'Maya wants to protect the team's image Leo wants to wait for Jonah they disagree about what matters most.'

Analytical paragraph

Write 8-10 sentences answering: Why is Maya's final decision a compromise rather than a complete victory for either character? Include a clear claim, TWO exact details from the scene, reasoning after each detail, and a conclusion.

WORDS YOU NEED TODAY

training data - examples used to teach a model

test data - separate unseen examples used to evaluate the trained model

generalization - performing well on new examples or conditions not seen exactly during training

overfitting - performing very well on training examples but poorly on new examples because learning was too narrow

fair evaluation - testing on examples not already used for training

variation - differences in angle, background, lighting, distance, or object example

LISTEN FIRST - VOICE TUTOR PROMPT

Hold this topic one more day. Wednesday showed Atticus can describe training vs test data, but his generalization definition was still 'taking in data.' Teach the exact distinction with a school analogy: practice problems teach; new quiz questions test transfer. Explain overfitting as memorizing narrow training patterns.

WORKED EXAMPLE 1

Training accuracy 100%, new-image accuracy 55% -> weak generalization and possible overfitting.

WORKED EXAMPLE 2

Training and testing on the same exact images -> unfair evaluation.

WORKED EXAMPLE 3

To reduce background dependence: train on cups with many backgrounds, angles, distances, and lighting conditions.

1. Define generalization without using the phrase 'takes in data.'

2. Define overfitting in one complete sentence.

3. Why must test data stay separate from training data until evaluation?

4. A model gets 98% on training images and 96% on new test images. What does this suggest about generalization?

5. A model gets 100% on training images and 40% on new test images. What does this suggest? Name the likely problem.

6. Name THREE kinds of variation you could add to cup training photos to reduce background dependence.

EXIT TICKET

E1. Complete: Training data _____ the model; test data _____ the model.

E2. Explain why overfitting can make training performance look excellent even when the model is not useful on new examples.

3:25-3:55

THEATRE - MOTIVATION IN PERFORMANCE

Same words, different intention.

WORDS YOU NEED TODAY

objective - what a character wants in the scene

tactic - the method a character uses to get what they want

subtext - the feeling or intention underneath the literal words

pace - how quickly or slowly a performer speaks

pause - a deliberate moment of silence

emphasis - extra stress placed on an important word or phrase

LISTEN FIRST - VOICE TUTOR PROMPT

This is normal Thursday enrichment, not makeup punishment for football. Use 'The Empty Chair.' Have Atticus perform Maya's line 'Fine. We wait ten minutes. Then we start.' as reluctant compromise and then as calm leadership. Discuss how pace, emphasis, posture, and pause change meaning. Then perform Leo's final line as relieved and as slightly annoyed.

1. For Maya's first performance, what is her objective?

2. Which word or phrase will you emphasize to show reluctant compromise?

3. For Maya's second performance, what changes in pace, posture, or tone will show calm leadership?

4. Perform Leo's final line once as relieved and once as slightly annoyed. What changed besides the words?

PERFORMANCE CHECK

Use one deliberate pause

Make one word noticeably emphasized

Keep the line understandable and audible

Explain the character objective after the performance

3:55-4:05

THURSDAY CLOSEOUT

Started -> Finished -> Checked -> Filed

NOTHING MISSING CHECK

History questions + exit

Math guided + independent + exit

Science questions + exit

Literature/Drama questions + exit

French practice + oral check

Writing reasoning + analytical paragraph

CS/AI practice + exit

Theatre performance + reflection

One thing I understand better today:

One glossary word I can define without looking:

One question I still have:

Thursday glossary - quick reference

Subject	Term	Meaning
History	representative democracy	citizens choose representatives who make many decisions on their behalf
Math	percent	a rate per 100
Science	selective reflection	reflecting some wavelengths more strongly than others
Literature/Drama	subtext	meaning or feeling underneath the literal words
French	de after negation	many un/une/des possession phrases become de after ne...pas
Writing	precise evidence	a specific detail that clearly

		supports the claim
CS/AI	overfitting	excellent training performance but weak performance on new examples because learning was too narrow
Theatre	objective	what a character wants in a scene

Theatre was missed Wednesday because of football and is not treated as incomplete work. Thursday Theatre is ordinary enrichment.

History: Direct: eligible citizens vote on the issue. Representative: citizens elect people to decide on their behalf. Athens had major citizenship exclusions.

Math warmup: 8 L/min; \$3/notebook.

Math guided: 35%; 62/100 and 0.62; 9; 37; 15.

Math independent: 42%; 18/100 and 0.18; 25; 43; 30; 30 pages; 20 levels; 20 vs 25, so 25% of 100 is larger.

Math exit: percent = per 100; 34; 12; 50% = $\frac{1}{2}$.

Science: Green reflects more green and absorbs much of other visible light; black absorbs most visible light; white reflects many wavelengths; blue object under red light can look dark because little blue light is available.

Literature/Drama: Maya protects team image; Leo values fairness/team contribution. Pause shows tension. Final choice is compromise: wait ten minutes, then start.

French: 1 sont. 2 avons. 3 etes. 4 Je n'ai pas de livre. 5 Ils n'ont pas de devoirs. 6 Elle n'a pas de calculatrice.

Writing: Require exact evidence and reasoning. Score mechanics separately.

CS/AI: Generalization = performance on new examples; overfitting = strong training but weak new-example performance; test data must remain separate.

Theatre: Assess performance choices, not memorization.
